

EuroMir® Acrylic Mirror

EuroMir® is a high quality, European grade acrylic mirror. It is available in a range of colours, in both gloss and satin finishes, and comes with a tough durable back coating.

► Features

EuroMir® (Acrylic) Mirror features one of the industries toughest back coatings. As a result the reflective qualities of EuroMir® are second to none. The toughness of the coating offers practical advantages during fabrication as it resists abrasion whilst being handled. EuroMir® is lightweight and possesses excellent shatter resistant qualities, making it a safer alternative to glass. If broken it will not shard, making it ideal for use in areas of high vandalism or where children may be present.

► Applications

This durable acrylic mirror is ideal for store design and fit outs, visual merchandising, slat walls, point-of-purchase displays, decorative walls and panels in venues such as night clubs and casinos, children's toys, cosmetic displays, splashbacks and for applications in the food service industry or areas where safety is of prime concern.

► Dimensions & Thickness

Gloss & Satin - 2050 x 1525mm or 3050 x 2050mm* Other sizes available on application. The standard thickness carried is 3mm, but other thicknesses such as 4mm, 6mm and 10mm are available upon request.
